

## **STELDOX-1** - Stimulate-Electrify-Detox

**OPERATION:** LED indicators are: -Power supply is applied, the device works properly (slowly flashing blue), -Output load is OK (faster flashes to permanent blue), -Overload / short circuit in the Output (Red). These are approximate, for orientation.

An internal timer switches off the output signal ~2 hours after the power on, to simplify unattended applications, like during sleep, preventing over-dosage. Turn the power off, then on again, to restart. For this reason the power supply is modified with a switch. It's better to insert the Steldox connector first, then to switch or insert the power supply. Be sure the Steldox connector is fully inserted in the female one.

Although applying Steldox with Elpid bath is beneficial, only 20 min isn't enough for substantial results. A good active healing would be 1-2 hours every other day, for several weeks, or as long as necessary; No more than 3 hrs per day / 4 hrs per 2 days (at one and same place); A break of 10-15 days is needed after a total of 40-50 days treatment; 1 - 2 times a month for prophylaxis.

One should keep in mind that all healing devices are only a temporary help to the real Health! Although surprising for most people (due to the numerous scientific and public prejudices), the baseline for preserving or recovering health is a radical mind change toward permanent prevailing of joy and love, kindness and warmth, honesty and dignity; freedom from any sadness, sorrow, anger, stress, formality, faiths and prejudices!

**Disclaimer: All efforts are made efficient and safe work to be ensured, however, this is an experimental device for research, Federal Code 21, D, 807.65, (f), and can be used solely on user's own responsibility. The author is in no way liable for any unsuccessful treatment, failure due to lack of treatment, or any other reason.**

Note: Steldox will work directly with ELPID S.N. 112 and up, + 102, 105, 106, 110; Others need a small modification, free of charge if sent to SELEQ (shipping paid by user), or in a local electronic shop, by instructions.

The right for any necessary changes reserved.

-V.2-Dec.2018-

A **very compact** electro-pulsating, frequency-resonance device for universal health improvement and prophylaxis; From the very promising complementary / integrative healing approach. It can be applied via Pad-electrodes, placed where needed on the skin, or via the Polarizing electrode of ELPID.

Simple, small, suitable for most people; **Very easy to use** – just plug and play, nothing to set and tune. With safe, body compliant current, it can **kill or modify** many germs and toxins; stimulate and vitalize all cells and organs. The healing current flows directly through the affected tissues, so the impact is immediate and strong.

**DESCRIPTION: It can be effective** in asthma, other allergies, spasms, numbness, cramps, addictions, arthritis, atherosclerosis, some cancers, chronic fatigue, diabetes, depressions, hemorrhoids, flue, inflammations, infections, Lyme, Morgellons, pain relief, osteoporosis, rheumatism, tumors, varicose veins, tuberculosis, Alzheimer and many others.

As with most cures, the effectiveness can strongly depend on the particular person, the cyclicity of the individual, of the surrounding atmosphere, etc; Almost no side effects – not advisable around large tooth fillings, epilepsy, life-sustaining devices (peacemaker), etc. Electrodes should avoid pubic and nipple areas, wounded/ abraded skin, also some warts, pustules, etc.

Main **Bob Beck's** frequencies are used, as very popular and with proven effectiveness, although they are not the best, nor the only ones. They are modulated in a special way with the **author's** found ones, and the best of the **Nogier's** frequencies, to ensure good acceptability, less harm, improved stimulation. The HF modulation makes it completely painless, harmless, better penetrating, more effective, and better affecting many of the subtle toxins, unknown to the standard microbiology yet, therefore unresponsive to the regular medicines.

At the output, the following are fractally nested: 4, 10, 40, 143 and 166 Hz, 1.2, 5 and 11.8 kHz, HF modulation 1 MHz. The pulses are up to 10 V, current is limited to a safe level.

**STELDOX can be more effective** and harmless than most Cranial-electro stimulators (CES), and some other electro-therapeutic devices; can be viewed as an enhanced TENS-device. The difference from their huge variety is: 1-Several frequencies are applied simultaneously; 2- Includes higher LF and has HF modulation; 3- No discomfort, completely painless; 4- Deeper penetration, longer lasting impact; 5- Very compact and convenient to use; 6- Lower, completely harmless current; 7- Has the highest power of the Info-impact!

The **healing aid is universal** and efficient. It is based on the notion that most of the bio-electrochemical processes in the body are done inside the cells – in the protoplasm and other cell's parts, as they are ~80% of the active body electrolytes, therefore the impact is directed towards them. The blood (~10%) is mostly for transportation.

The **effectiveness** is due to the electric current itself, to the individual frequencies, and to all of them as a combination. The main impact is to stimulate and amplify to normal the work of every cell, tissue, organ, system! The 2nd one is devitalizing or

reducing the harm of many pathogenic germs. In a 3rd place is modifying toxins and metabolic wastes, accumulated in the cells and intracellular spaces, to less harmful substances.

Also: Nourishing the body's natural electrical system; Supporting the immune system; Activating white blood cells; Restoring cells to a healthy voltage; Cleaning up excessive free radicals as an antioxidant; Balancing the nervous system; Improving blood circulation; Improving the production of the important in energy transfer ATP, and others.

**Comparing with ELPID:** --Electrical pattern of Elpid is applied between the 2 electrodes in the tray, or in the compress material (the current flows mostly through the water medium). In Steldox it immediately flows through the body tissues. --Elpid uses ELF (almost DC) and the transitions (slopes) between the pulses, while Steldox is Frequency-impact. --Elpid is mostly sucking, removing toxins out of the body; Steldox is killing and modifying germs and toxins inside the body. Therefore, it's good to apply Elpid after Steldox, sometimes simultaneously. --Steldox is much easier to use – no bath, water, tray, compress...

**ACCESSORIES: a)-** Stand-alone (Pad) option: cable assembly [2], power supply [3], 2 pairs of electrodes, ~1-1/2" x 3" (4x8 cm), from some of the follows types [4]: --conductive fabric (brown side) (not very durable conductivity); --small card-board, enveloped with Aluminum foil (usually used for cooking) (not very durable mechanically); --Adhesive foam sheet + Adhesive vinyl foil (can be 2 layers) + Heavy duty Aluminum foil (about the best for now), etc.

The customer can prepare more of them. They can be fixed on the skin by the clothing, blankets (at night), with elastic bands, etc.

Some of the widely spread TENS-electrodes also can be used, but their conductivity is not quite good, nor the durability, and their stickiness might not be comfortable.

**b)-** to connect with ELPID: cable assembly with a piggy-back connector for Steldox [6], or a splitter-adapter to the regular cables [5]. Steldox will continue to be powered on, while Elpid is in StandBy; LEDs 'Pz' on Elpid, and 'Iok' on Steldox may light up without a patient, as they are influenced mutually in this option.
